ABOUT US

Constantly researching and innovating...

Finetech Research and Innovation Corporation was established in 1999 and has been engaged in the gas and fluid filtration used in laboratories and the medical fields for many years. We concentrate on the researching, developing, and manufacturing of lab filters such as syringe filters, 50mm air/vent filters, pipette filters, gas analyzer filters, and customized filters.

In 2004, we were the first manufacturer of transducer protectors used in dialysis. In 2017, sales of transducer protectors had reached to over 30 million pieces/year. Our high quality and ISO 13485 certified transducer protectors has kept our customers satisfied for more than 14 years.

Manufactured in 2010, our syringe filter is designed to provide efficient filtration of aqueous and organic solutions. It can be used to remove particles from a sample prior to analysis by HPLC, for the filtration of gases, and for the removal of bacteria from a sample. Syringe filters are widely used in environmental, pharmaceutical, biotechnology, and agricultural testing laboratories.

In 2015, Finetech designed and manufactured caps, septa, and samples vials used in chromatography. We supply HPLC consumables to the global chromatography community in over 36 countries. We constantly innovate with releases of new lab consumables and medical devices every year. Some of the other products we manufacture are sterile syringe filter, membrane filters, centrifuge tube, glass microfiber filters, vacuum filtration system, and QuEChERS. To find out more, please visit our website "www.finetech-filters.com".

Product Timeline

1999

Finetech Research and Innovation Corporation established.

2008

Developed autoclavable transducer protector.

2012

Produced the first 50mm air/vent filters in Taiwan.

2015

Started production of vials for chromatography and environmental analysis.

2016

New product launched – sterile filtration cup.

2018

Researched and developed QuEChERS kit

2020

Disposable Medical Masks

2004

Developed transducer protectors. Was the first manufacturer in Asia.

2010

Produced the first syringe filters manufactured in a cleanroom in Taiwan.(PureTech)

2014

Started producing sterile syringe filters.

2015

Vacuum Pump & Vacuum Filtration System (Stainless Steel manifold)

2017

Produced 15mL & 50mL centrifuge tubes (sterile & non-sterile)

2019

A7. Finetech® Automated Certified Syringe Filters

◆ Ideal for HPLC and UPLC automated sample processing and sample clarification

- High flow rate : available with multilayer membranes
- High Throughput : two to four times the throughput of standard glass fiber prefilter devices.
- Superior HPLC column protection – Better retention efficiency helps extend column life
- Suitable for Automation devices – Designed to be fully compatible and reliable for use with the SOTAX and Zymark automated test systems.

Consistent Turret Advancement

B2 Glass Fiber Filters

Micro-glass fiber filters offer high efficiency, submicron particle retention combined with high permeability and high dust holding capacity. Micro-glass filters are made of high-purity borosilicate glass microfibers that are biologically inert and resistant to most solvents and reagents with the exception of hydrofluoric acid and highly concentrated alkali solutions.

Binder-free grades are temperature resistant to about 500°C. Grade MG 550 HA can withstand temperatures to 550°C.

E. Microcentrifuge Tubes

❖ Features

- ▶ Constructed of high transparency PP, resistant to chemicals and low temperatures.
- ▶ Easy to open and close cap with one hand.
- ▶ DNase/RNase and pyrogen free.
- ▶ Heavy metal free
- ▶ Handles centrifuge speeds of up to 15,000 RPM.
- ▶ With clear and precise graduation on the sides.
- ▶ Frosted areas on cap and tube for easy labeling.
- ▶ Usable temperature range of -80°C - 121°C

New Design of Septa

• Pre-Slit PTFE/non-slit silicone Septa

• Septa Benefit

Finetech® Sample (A) : Pre-slit PTFE / non-slit silicone septa

Sample (B) : Non-slit PTFE /silicone septa

Sample (C) : Pre-slit PTFE /silicone septa

1. Finetech® Sample (A) will not be dropped off after punching many times, as compared with Sample (B) (Fig1)
2. Finetech® Sample (A) can keep volatile solvents better than Sample (C) (Fig3)
3. Finetech® Sample (A) decreases the damages of micro-syringe
4. Finetech® Sample (A) decreases the resistance of punching more than Sample (B)
5. Finetech® Sample (A) is made of original PTFE and Silicone

Quality Control of Caps

◆ Number on cap housing for traceability

■ Finetech(cave number)

■ Ohter brand (no cave number)

Chemical Testing

◆ Bleed Test of Septa Using HPLC Fixed Syringes

● Experimental goal:

Bleed test of septa by using HPLC fixed syringes.

1. The different brands of septa were mounted on the vial caps.
2. Use salicylic acid as standard and add 1 mL of ACN:H₂O=1:1 as solvent to the vials.
3. Analyze the solvents by HPLC-UV (n = 18).

EXPERIMENTAL

Instrument	Brand A 1200 LC
Wavelength	235 nm
Mobile phase	ACN:H ₂ O=40:60
Column	Kinetex 5 μ C18 100A
Flow	1.5 mL/min
Injection size	20.0 uL
Solvent	ACN:H ₂ O=1:1

● Experimental results

1. The HPLC results show less interference and more signal area of the standard in Finetech's septa than Brand A. Therefore, Finetech's septa can be seen as being less likely to dissolve interfering compounds into the sample

	RetTime (min)	Width (min)	Area (mAU)	Height (mAU)	Area %
Finetech	0.749	0.0296	1481.08228	773.61224	69.021
Brand A	0.737	0.0386	814.18939	317.87524	49.748

2. Recovery rate of standard was 96-104%.

Test of Septa

◆ Volatility Test

◆ Punching Test

Digital Tensile Strength Test Machine

- I . Septa and caps are assembled as (Fig2)
- II . Simulator : Use digital Tensile Strength Test Machine to measure the resistance force
- III . Measure the strength of a flat needle to punch septa
- IV . Resistance force of Finetech® Sample(A) : 0.17-0.21 kgf Resistance force of Sample (B) : 0.34-0.39 kgf

Physical Testing

- **Purpose** : To test the adhesion strength between the PTFE and silicon layer. Results should exceed 19.6 N (about 2 kgf).
- **Procedure** : After bonding PTFE and silicon, let stand for 1 minute. Take 10 pcs and test the peel strength with tensile testing machine set at 50mm/min load rate.

Results:

	1	2	3	4	5	6	7	8	9	10
Peel Strength (N)	28	23.2	21	26.3	38.5	24.2	27.9	32	27.1	28.4

- **Conclusion:** The peel strength test conducted on the PTFE/silicon septa material shows to exceed the criteria of 19.6 newtons.

Why Choose VOA Vials?

VOA vials are specifically designed for use with volatile organic compounds. They are available in both clear and amber borosilicate glass and have a temperature range of -40°C to 125°C.

- Ready to use caps: no time-consuming assembly
- No contamination of the liner that is normally caused by manual assembly
- Available as closed top screw or with centre hole in white or black 24-400 caps
- Broad variety of different septa materials for almost all applications

J. Micropipettes & Tips

J1 Micropipettes

❖ Key Features

- ▶ Available in the range of 0.1µL to 10mL
- ▶ Autoclavable 121°C (20min)
- ▶ Corrosion-resistant ceramic-piston and ejector

❖ Product Description

Finetech's variable volume micropipettes are products of intensive ergonomic and operational studies and the application of modern innovative materials. They are the perfect manual pipettes for demanding laboratory applications and scientists who prefer central pipetting buttons. The micropipettes provide all of the features required by users working in the life sciences field. Robust, one-handed operation, easy to calibrate, completely autoclavable, with high precision and reliability.

The S Series micropipettes offers a ceramic piston for increased durability and corrosion resistance over the traditional plastic or metal pistons.

❖ Lightweight-Accurate-Low force

The piston-operated micropipettes provides maximum versatility and optimum quality over the entire volume range. There are 8 single-channel pipettes available in the 0.1µL to 10mL range in variable volume.

❖ Features

- ▶ Large central pipetting button and separate ejection function.
- ▶ One-handed operation for both right- and left-handers.
- ▶ Completely autoclavable at 121°C (20min).
- ▶ Volume-change protection.
- ▶ Vertical 4-position volume display, allows a clear view in either hand.
- ▶ Short stroke of only 12.5mm to reduce the risk of RSI (Repetitive Strain Injury).
- ▶ Corrosion-resistant ceramic-piston and ejector.
- ▶ Optimized standard design for the tip cone allows compatibility with a wide range of tips.
